

Governance Concentration by Architecture (N=44 governance-token-measured, of the 52-protocol cross-section)
Kruskal-Wallis $p = 0.010$, $\varepsilon^2 = 0.18$

Source: Author calculations. Diamond = mean; horizontal line = median; protocols overlaid. Governance-token measurement only; Social tokens ($n=2$) excluded from the contrast. DePIN is more concentrated than both DeFi and L1; DeFi and L1 are not distinguishable.
